PROFESSIONAL SUMMARY

Business Systems and Operations Analyst with experience delivering KPI reporting, business performance analysis, ERP system support, data quality initiatives, process mapping, requirements gathering and business systems improvement within complex operational environments. Skilled in SQL, Power BI, SAP ERP, stakeholder engagement, business process analysis and change support, with a proven ability to translate operational and financial data into actionable insights that support decision-making, system enhancement and business performance.

CORE SKILLS

DATA ANALYTICS & BI

- SQL (data extraction, transformation, and analysis across operational and transactional datasets)
- Power BI dashboards and visual reporting
- Operational and KPI reporting
- Excel (analysis, reconciliation, and reporting)
- Application monitoring and system checks
- Exploratory data analysis (EDA) and trend identification
- Data-driven insights and decision support

BUSINESS ANALYSIS & BUSINESS SYSTEMS

- Requirements gathering and documentation
- Business process analysis
- Stakeholder engagement and management
- Gap, impact and root cause analysis
- Process mapping and documentation
- User stories and acceptance criteria
- Process improvement and optimisation

DELIVERY & CHANGE

- Digital transformation and system rollout support
 - Operational readiness and transition management
 - Cross – functional collaboration
 - Audit and compliance documentation
-

PORTFOLIO PROJECTS

Clontarf Depot Operational Performance & Regulatory Compliance Monitoring

- Business Systems Analysis case study demonstrating stakeholder analysis, process mapping, requirements gathering, business rules, user stories, acceptance criteria, SQL analytics, and Power BI dashboard design within a public transport operations environment.

AdventureWorks Sales & Business Performance Analytics

- End-to-end SQL and Power BI analytics project using the AdventureWorks dataset, including data modelling, KPI reporting, trend analysis, business performance monitoring, dashboard development, and executive reporting concepts.

PROFESSIONAL EXPERIENCE

CLERICAL OFFICER | 10/2018 – Present

Dublin Bus, Dublin, Ireland

Selected Business Systems & Operations Analyst Responsibilities:

- Act as a key point of contact between operational users, IT, and Technology Development teams, supporting the daily use of enterprise systems within a regulated transport environment.
- Support business processes and data management activities within SAP ERP, ensuring data accuracy, process compliance and operational effectiveness.
- Analyse diagnostic breach codes and validate system data accuracy, contributing to improved data quality and system reliability.
- Process operational and financial transactions within SAP (using MIGO and ML81N), ensuring data accuracy and supporting procurement and financial control processes.
- Produced process maps and workflow documentation to support stakeholder understanding, requirements analysis, and business systems improvement initiatives.
- Perform data validation and cleansing activities to improve reporting accuracy and increase confidence in operational reporting and decision-making.
- Develop and document operational procedures, user guidance and process documentation to support business requirements, system adoption and data quality initiatives.
- Query and analyse SAP operational data to identify service events, validate business records and support operational investigations, translating findings into actionable insights for stakeholders.

- Design and maintain Power BI dashboards that improve visibility of operational KPIs, performance, trends and business outcomes, supporting data-driven decision-making.
 - Gather and document operational and technical requirements from business stakeholders, translating business needs into clearly defined system and process requirements.
 - Conduct root cause analysis on recurring system and operational issues, identifying underlying trends and supporting continuous process and system improvements.
 - Supported business systems enhancements and change initiatives, identifying process impacts, data requirements and user adoption considerations.
 - Carry out routine application checks and monitoring activities to support system stability and early identification of risks or anomalies.
 - Support structured change and system rollout initiatives, identifying gaps between systems, data flows, processes, and user impact.
 - Maintain accurate system, application, and equipment records to support asset traceability and operational continuity.
 - Compile documentation and audit evidence in support of internal controls and external regulatory requirements.
 - Document requirements as user stories with clear acceptance criteria to support testing, quality assurance, and release readiness.
 - Coordinate clear and timely stakeholder communications during system incidents, outlining impact, workarounds, and resolution timelines.
-

SERVICE DESK ANALYST | 11/2016 – 10/2018

JD Sports, Dublin, Ireland

- Provided technical and operational support to service users, ensuring continuity of business-critical applications and services.
 - Supported regulatory and compliance processes by maintaining accurate operational and licensing records.
 - Improved operational efficiency through automation of administrative processes and structured record management.
 - Coordinated weekly activities and monitored delivery timelines to support service continuity and client expectations.
-
